LED CHARACTERISTICS Because LEDs are semiconductor devices, their performances are subject to inherent variability commonly found in semiconductor industry. To improve consistency in performance across the same product, LED manufacturers "sort" LEDs into bins according to different preset parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process results always in different binning distributions according to different production lots. Traxon uses automatically binned LEDs on its products, thereby minimizing output variations within the model range.

As with all electronic devices, LED output degrades over time - a term called lumen depreciation. This also explains why it is nearly impossible to expect photometric performances of two LED products with different service life spans to be the same. The rate of LED degrade is a complicate function of many factors such as operating efficiency, duration of continuous operation, and more significantly, environmental conditions (ambient temperature for example). If allowed working under optimal operating temperature range and with good ventilation, LED devices enjoy long service lives over conventional light sources. When using/installing LED devices, care should be taken to ensure that the devices will operate within the operating conditions specified in respective product literature.

This product contains a light source of energy efficiency class G to Regulation (EU) No 2019/2015.
Lumen measurement complies with LM-79-08 standard.
Lumen maintenance is calculated based on LM-80 compliant measurement.

T-cable Wiring

Y-cable Wiring

- Data cabling from DMX source to Starter cable shall be Cat5e UTP or other cable type suitable for DMX communication.

	For controlling the fixtures	For addressing the fixtures
Section A. Maximum distance from Control/Addressing source to the first fixture	80m / 262'	80m / 262'
Section B. Maximum distance between fixture to fixture	30m / 98'	12m / 39'
Section C. Maximum distance from Control source to last fixture on a single DMX512 link	200m / 656'	200m / 656'
Section D. Maximum number of fixture on a single DMX512 link	40pcs	40pcs

- Maximum number of fixture per input power line cannot exceed total wattage of 168W (OE), and 100W (US Class 2 PSU):
Linear Go mini 320mm / 12.6": 4.5W or 3.4W
Linear Go mini 600mm / 23.6": 9W or 6.8W
Linear Go mini 900mm / 35.4": 13.5W or 10.2W
Linear Go mini 1200mm / 47.2": 18W or 13.6W
Note: 3.4W or 4.5W per 300mm / 1ft.
3.4W per foot model meets ASHRAE 90.1-2022 Zone 3 requirements.

Example:

Fixture daisy chain		
Voltage	Fixture Total Power Consumption *	Max Number of fixtures
24V DC (OE)	162W	e.g. 9pcs 1200mm (18W) per PSU input chain
24V DC (ETL) with Class 2 PSU	85.5W	e.g. 4pcs 1200mm (18W) + 3pcs 320mm (4.5W) per PSU input chain

Maximum number of fixtures is based on minimal interconnection lengths fixture to fixture.
Actual number of fixtures is dependent on cable interconnection lengths. The number of fixtures will reduce if longer cable lengths are used. Please consult regional sales office to confirm maximums.

* Consider some Power Supply Unit (PSU) wattage buffer for total power consumption
